

Pingball Phase 1 Work Contract

Goals

- The goal of this project is to learn to write and communicate functional modular code that teammates will find useful.
- An expectation of this project is that the workload should be distributed evenly not in the amount or difficulty of the code written but in the amount of hard effort put into the project. More experienced coders would naturally contribute more to the project than less experienced coders in terms of lines written.
- Another expectation is that less experienced coders should ask teammates for mentorship if needed so that deadlines can be reached in time.

Meeting Times

- Meeting times that are also class time will be used as a status check on the project and will be used to ensure that the different modules of code are well integrated.
- We will be meeting outside of class and most of the programming will be done in pairs if possible so that immediate feedback is available when stuck.

Work Norms

- We anticipate to spend 15 hours on the project each.
- Written records to track accountability will be kept on a google form and progress will be constantly visible to all members of the team.
